Appendix J: Classroom Observation Sheet (for main study)

Inspector's Classroom Observation Sheet

Observation Date: _____

Inspector: Abdelghani FARAH **Specialty:** English Inspector (30 Years of experience)

School: Chiekh Larbi Tebessi secondary-school, Tebessa.

Observed Group: ■ Experimental (ICM) ☐ Control (Traditional)

Observed Week: ☐ W1 ☐ W2 ☐ W3 ☐ W4 ☐ W5 ■ W6

Session(s): ■ 1 ■ 2 ■ 3

Instruction: Complete the Section A table that matches the observed group. The other Section A table may be left blank.

A. Instructional Format and Feedback Cycle

A1. Experimental Group (ICM)

S.	Observed Feature	Y.	P.	N.	Evidence / Notes
1	Teacher introduces the prompt and activates prior knowledge or task understanding.	■	☐	☐	Teacher spent 10 minutes on prompt introduction. Students already familiar with routine. Brief activation of knowledge through some questions.
1	Students work in small collaborative groups (e.g., 4–5 learners) with visible role-sharing or coordinated drafting.	■	☐	☐	Groups formed automatically. Roles (scribe, decoder, presenter, Timekeeper) were well-established and rotated.
1	Groups produce one collaborative draft for submission.	■	☐	☐	Each group produced a collaborative draft efficiently. Discussion was focused and productive. Drafts submitted at end of session 1.
1	Teacher collects drafts and applies coded feedback symbols only, without direct written correction.	■	☐	☐	Teacher collected drafts and applied coded symbols after class. No direct corrections written. Symbols consistent with previous weeks.
2	Teacher returns drafts with coded symbols and students begin decoding them.	■	☐	☐	Drafts returned. Students decoded symbols. Reference cards not used. Symbols fully internalized.
2	Students discuss the codes and negotiate corrections within groups or with peers.	■	☐	☐	Groups discussed error types with minimal teacher input. Students justified choices and debated alternatives.
2	Peer exchange across groups occurs and the teacher facilitates without supplying direct answers.	■	☐	☐	Groups exchanged drafts with one another. Students provided constructive peer feedback. Teacher observed but rarely intervened.
3	Groups revise and complete a final draft that incorporates coded and peer feedback.	■	☐	☐	Groups revised efficiently. All groups completed a polished final draft within the allocated time.
3	Final presentation, summary feedback, and individual reflection closes the cycle.	■	☐	☐	Each group presented for 3–4 minutes. Teacher provided concise summary feedback. Students wrote individual reflections.

Note: S.: Session, Y.: Yes, P.: Partly, N.: No

A. Instructional Format and Feedback Cycle (continued)

A2. Control Group (Traditional Correction)

S.	Observed Feature	Y.	P.	N.	Evidence / Notes
1	Teacher introduces the writing prompt or task without collaborative modelling.	☐	☐	☐	
1	Students draft individually and work mostly in silence.	☐	☐	☐	
1	Drafts are collected at the end of the session.	☐	☐	☐	
2	Students continue the same essay individually; no pair or group discussion is required.	☐	☐	☐	
2	Teacher circulates mainly to answer individual questions rather than facilitate peer learning.	☐	☐	☐	
2	Teacher collects completed drafts for home correction or later return.	☐	☐	☐	
3	Corrected essays are returned with underlining and direct written correction.	☐	☐	☐	
3	Students review corrections individually, with limited questioning.	☐	☐	☐	
3	A model text or teacher-provided correct version is supplied and copied.	☐	☐	☐	

Note: S.: Session, Y.: Yes, P.: Partly, N.: No

B. Student Engagement and Interaction

Indicator	V. L.	L.	M.	H.	V. H.	Notes
Attention during teacher explanation or task briefing	☐	☐	☐	☐	■	Students listened attentively. Routines well-established. No confusion.
Engagement with received feedback or corrections	☐	☐	☐	☐	■	Students decoded symbols automatically. Reference cards not used.
Quality of peer or pair interaction (when relevant)	☐	☐	☐	☐	■	Discussions sophisticated. Students justified choices and debated alternatives.
Willingness to ask questions about errors or revisions	☐	☐	☐	☐	■	Questions rare. Students resolved most issues within groups.
Use of metalanguage (e.g., tense, agreement, article, punctuation)	☐	☐	☐	■	☐	Consistent use of grammatical terms. Students named error types confidently
Student-initiated correction or revision	☐	☐	☐	☐	■	Students initiated corrections without any prompting.
Overall participation and on-task behaviour	☐	☐	☐	☐	■	All groups focused. Seamless transitions. No off-task behaviour.

Note: V.L.: Very Low, L.: Low, M.: Moderate, H.: Height, V.H.: Very Height.

Estimated percentage of actively engaged students: 92 – 95 %

Inspector's Note:

Week 6 shows sustained high engagement. Students have fully internalized the JCM. They operate autonomously. Teacher's role is minimal. Metalanguage use is consistent. The classroom hums with productive collaboration.

C. Classroom Dynamics and Teacher Practices

Observation Category	Notes
Clarity of instructions and task guidance	Instructions were minimal. Students knew routines. Teacher observed more than instructed.
Responsiveness to students' questions	Teacher rarely needed to respond. Students resolved issues within groups.
Type and quality of feedback provided	Coded symbols consistent. No direct corrections. Feedback accurate and targeted.
Classroom organization, seating, and noise level	Groups formed automatically. Productive collaborative noise. No off-task behaviour.
Time management across phases or sessions	All phases completed within allocated time.
Use of board, model text, coding system, or visual aids	Poster not consulted. No model text provided. Students produced their own.
Evidence of student autonomy and self-correction	very high. Students initiated corrections, consulted peers, revised independently.
Encouragement of discussion, revision, or reflection	Teacher encouraged reflection. Students wrote brief reflections on learning.

D. Comparative Lens (Optional)

Dimension	Experimental Group (ICM)	Control Group (Traditional)
Nature of feedback provided	Coded symbols only	Red underlines + direct corrections.
Teacher role during correction	Facilitator, observer	Corrector, model provider
Student role during the lesson	Autonomous decoder, collaborator, reviser, presenter	Passive receiver, copier
Peer interaction and collaboration	Extensive (within groups, between groups, presentations)	None
Student engagement with feedback	92–95% actively engaged.	10–15% glanced at corrections
Revision requirement	Yes (final revised draft every week)	No (only copied model texts)
Use of metalanguage	Consistent and accurate	None
Observable learning behaviours	Decoding, discussing, debating, revising, presenting, reflecting	Copying, glancing, waiting
Student autonomy	very high	None
Evidence of progress or improvement	Significant (errors reduced, writing quality improved)	Very modest (almost the same errors as weeks)

Comparative Note:

After 6 weeks, the divergence is complete. The "EG" has transformed into autonomous, collaborative learners. Students talk about language, revise their work, and present to peers. The "CG" remains passive, isolated, and dependent. The ICM is unequivocally superior.

E. Challenges or Constraints Observed

Challenge	Y.	N.	Description / Evidence
Confusion with feedback symbols, instructions, or task expectations	☐	■	No confusion, symbols fully internalized.
Limited engagement with feedback or corrections	☐	■	Engagement sustained at 92 – 95%.
Uneven participation among students or groups	☐	■	Equitable participation. Roles rotated weekly.
Over-reliance on teacher confirmation or direct answers	☐	■	Students resolved issues within groups.
Weak or absent peer interaction where collaboration was possible	☐	■	Peer interaction extensive and productive.
Mechanical copying or superficial completion without understanding	☐	■	Students produced original revisions, not copies.
Difficulty moving between phases, tasks, or transitions	☐	■	Transitions seamless.
Off-task behaviour, distraction, or loss of focus	☐	■	No off-task behaviour observed.
No visible revision or limited transfer of feedback to later writing	☐	■	Revision occured every week. Transfer evident.
Other (specify):_____	☐	■	None observed.

Note: Y.: Yes, N.: No

F. Overall Impression and Summary Comments

Strengths observed during the session:

1. Full fidelity of TCM implementation.
2. Extensive peer interaction and sophisticated peer discourse using metalanguage.
3. Clear evidence of student autonomy and improvement.
4. Teacher as observer/facilitator

Weaknesses / concerns observed:

1. very small minority (3–5%) of students remain less engaged (consistent with general academic profile).
2.
3.
4.

General summary comment: weeks 6 confirms the effectiveness of the TCM. Students have become autonomous, collaborative, and proficient in metalanguage. Errors have reduced. Writing quality has improved. The teacher has successfully transitioned to a facilitator role. The contrast with the "CG" is stark and conclusive.

Recommendations for Subsequent Sessions

1. The TCM should be continued as standard practice.
2. Share successful strategies with other teachers for broader
3. implementation.
4.
5.

Final Summary Comment from the Inspector: After six weeks of observing the TCM, I can state with confidence that it produces meaningful learning gains. Students are engaged, autonomous, and collaborative. They use metalanguage confidently. They revise their work. They present to peers. They reflect on their learning. Their writing has improved and errors have reduced.
