Inspector's Classroom Observation Sheet

Observation Date: _____

Inspector: Mohamed SAIDI **Specialty:** English Inspector (30 Years of experience)

School: Chiekh Larbi Tebessi secondary-school, Tebessa.

Observed Group: ☐ Experimental (ICM) ■ Control (Traditional)

Observed Week: ☐ W1 ☐ W2 ☐ W3 ☐ W4 ☐ W5 ■ W6

Session(s): ■ 1 ■ 2 ■ 3

Instruction: Complete the Section A table that matches the observed group. The other Section A table may be left blank.

A. Instructional Format and Feedback Cycle

A1. Experimental Group (ICM)

S.	Observed Feature	Y.	P.	N.	Evidence / Notes
1	Teacher introduces the prompt and activates prior knowledge or task understanding.	☐	☐	☐	
1	Students work in small collaborative groups (e.g., 4–5 learners) with visible role-sharing or coordinated drafting.	☐	☐	☐	
1	Groups produce one collaborative draft for submission.	☐	☐	☐	
1	Teacher collects drafts and applies coded feedback symbols only, without direct written correction.	☐	☐	☐	
2	Teacher returns drafts with coded symbols and students begin decoding them.	☐	☐	☐	
2	Students discuss the codes and negotiate corrections within groups or with peers.	☐	☐	☐	
2	Peer exchange across groups occurs and the teacher facilitates without supplying direct answers.	☐	☐	☐	
3	Groups revise and complete a final draft that incorporates coded and peer feedback.	☐	☐	☐	
3	Final presentation, summary feedback, and individual reflection closes the cycle.	☐	☐	☐	

Note: S.: Session, Y.: Yes, P.: Partly, N.: No

Week 6

A. Instructional Format and Feedback Cycle (continued)

A2. Control Group (Traditional Correction)

S.	Observed Feature	Y.	P.	N.	Evidence / Notes
1	Teacher introduces the writing prompt or task without collaborative modelling.	■	□	□	Teacher spent 10 minutes explaining the prompt. Same pattern as week 1. No collaborative planning.
1	Students draft individually and work mostly in silence.	■	□	□	students sit at tables for 2 but worked individually. Silence maintained. Attention has declined since week 1.
1	Drafts are collected at the end of the session.	■	□	□	Drafts collected. Several students submitted papers with large empty spaces.
2	Students continue the same essay individually; no pair or group discussion is required.	■	□	□	Students continued drafting individually. No peer discussion across six weeks.
2	Teacher circulates mainly to answer individual questions rather than facilitate peer learning.	■	□	□	Teacher answered 2 questions. Never facilitated peer discussion across six weeks.
2	Teacher collects completed drafts for home correction or later return.	■	□	□	Drafts collected. Teacher has corrected 6 essays over six weeks
3	Corrected essays are returned with underlining and direct written correction.	■	□	□	essays returned with red underlines and direct correct forms written above / beside errors.
3	Students review corrections individually, with limited questioning.	■	□	□	Glance time has declined since week 1
3	A model text or teacher-provided correct version is supplied and copied.	■	□	□	sixth model text provided. students copied diligently. No transfer to own writing

Note: S.: Session, Y.: Yes, P.: Partly, N.: No

B. Student Engagement and Interaction

Indicator	V. L.	L.	M.	H.	V. H.	Notes
Attention during teacher explanation or task briefing	☐	■	☐	☐	☐	Students listened passively. Attention declined since week 3
Engagement with received feedback or corrections	■	☐	☐	☐	☐	Most students didn't need corrections.
Quality of peer or pair interaction (when relevant)	■	☐	☐	☐	☐	No peer interaction across six weeks.
Willingness to ask questions about errors or revisions	■	☐	☐	☐	☐	No questions asked. Students have stopped wondering
Use of metalanguage (e.g., tense, agreement, article, punctuation)	■	☐	☐	☐	☐	None
Student-initiated correction or revision	■	☐	☐	☐	☐	No revision attempted.
Overall participation and on-task behaviour	☐	■	☐	☐	☐	Students complied with copying but showed no cognitive engagement.

Note: V.L.: Very Low, L.: Low, M.: Moderate, H.: Height, V.H.: Very Height.

Estimated percentage of actively engaged students: 10-15 %

Inspector's Note:

After six weeks, students engagement with corrections has declined. Passivity is entrenched. Students have learned to comply but not to learn.

C. Classroom Dynamics and Teacher Practices

Observation Category	Notes
Clarity of instructions and task guidance	Instructions remain clear.
Responsiveness to students' questions	No questions asked. Teacher circulated but no interaction.
Type and quality of feedback provided	Red underlines + direct corrections. Corrections accurate.
Classroom organization, seating, and noise level	Students sat Tables for 2 but never spoke across six weeks.
Time management across phases or sessions	Same pattern as weeks. Time not exploited fruitfully.
Use of board, model text, coding system, or visual aids	Sixth model Text provided. Students copied diligently. No transfer to own writing.
Evidence of student autonomy and self-correction	None. Students have learned to wait for Teacher
Encouragement of discussion, revision, or reflection	No discussion, revision, or reflection encouraged across six weeks.

D. Comparative Lens (Optional)

Dimension	Experimental Group (ICM)	Control Group (Traditional)
Nature of feedback provided	Coded symbols only	Red underlines + direct corrections.
Teacher role during correction	Facilitator, observer	Corrector, model provider
Student role during the lesson	Autonomous decoder, collaborator, reviser, presenter	Passive receiver, copier
Peer interaction and collaboration	Extensive (within groups, between groups, presentations)	None
Student engagement with feedback	92–95% actively engaged.	10–15% glanced at corrections
Revision requirement	Yes (final revised draft every week)	No (only copied model texts)
Use of metalanguage	Consistent and accurate	None
Observable learning behaviours	Decoding, discussing, debating, revising, presenting, reflecting	Copying, glancing, waiting
Student autonomy	very high	None
Evidence of progress or improvement	Significant (errors reduced, writing quality improved)	very modest (almost the same errors as weeks)

Comparative Note:

After six weeks, the divergence is complete. The "CG" has shown no real improvement. The "EG" has transformed. The ICM is unequivocally superior.

E. Challenges or Constraints Observed

Challenge	Y.	N.	Description / Evidence
Confusion with feedback symbols, instructions, or task expectations	☐	■	No symbols used. Instructions clear.
Limited engagement with feedback or corrections	■	☐	Engagement declined from 15–6%, to 10–15%.
Uneven participation among students or groups	☐	■	No group work.
Over-reliance on teacher confirmation or direct answers	■	☐	Students expected Teacher to fix all errors.
Weak or absent peer interaction where collaboration was possible	■	☐	No peer interaction.
Mechanical copying or superficial completion without understanding	■	☐	Students copied six model Texts without improvement.
Difficulty moving between phases, tasks, or transitions	☐	■	No phases
Off-task behaviour, distraction, or loss of focus	☐	■	Classroom orderly but passive.
No visible revision or limited transfer of feedback to later writing	■	☐	No revision across six weeks.
Other (specify):_____	☐	■	None observed

Note: Y.: Yes, N.: No

F. Overall Impression and Summary Comments

Strengths observed during the session:

1. Teacher corrected 216 essays with consistency.
2. Model Texts were excellent.
3. Classroom management flawless.
4. Teacher maintained fidelity to traditional method.

Weaknesses / concerns observed:

1. No observable improvement in writing after six weeks.
2. Student engagement with feedback declined.
3. No revision ever required / No metalanguage development / No transfer.
4. Teacher effort did not translate to learning.

General summary comment:

Week 6 confirms what week 1 suggested: traditional correction produces compliance, not competence. Students copy model texts beautifully but do not learn to correct their own errors. The same errors appear in week 6 as in week 1.

Recommendations for Subsequent Sessions

1. Abandon passive review sessions; replace with structured revision.
2. Introduce peer discussion.
3. Teach students a simple coding system for self-correction.
4. Require revised drafts.
5.

Final Summary Comment from the Inspector: After six weeks, the traditional correction model produced no observable learning gains. The method is efficient for classroom management but ineffective for learning.
