Inspector's Classroom Observation Sheet

Observation Date: _____

Inspector: Mohamed SAIDI **Specialty:** English Inspector (30 Years of experience)

School: Chiekh Larbi Tebessi secondary-school, Tebessa.

Observed Group: ■ Experimental (ICM) ☐ Control (Traditional)

Observed Week: ☐ W1 ☐ W2 ☐ W3 ■ W4 ☐ W5 ☐ W6

Session(s): ■ 1 ■ 2 ■ 3

Instruction: Complete the Section A table that matches the observed group. The other Section A table may be left blank.

A. Instructional Format and Feedback Cycle

A1. Experimental Group (ICM)

S.	Observed Feature	Y.	P.	N.	Evidence / Notes
1	Teacher introduces the prompt and activates prior knowledge or task understanding.	■	☐	☐	Teacher spent 10 minutes introducing the prompt. Asked students to contribute examples related to the topic. Several students raised hands and shared ideas.
1	Students work in small collaborative groups (e.g., 4–5 learners) with visible role-sharing or coordinated drafting.	■	☐	☐	Groups formed immediately. Roles were assigned and rotated (decoder, presenter, scribe)
1	Groups produce one collaborative draft for submission.	■	☐	☐	each group produced a single collaborative draft after 40 minutes of discussion and joint writing. Drafts submitted at end of S1.
1	Teacher collects drafts and applies coded feedback symbols only, without direct written correction.	■	☐	☐	Teacher collected drafts and applied coded symbols after class. No direct corrections written.
2	Teacher returns drafts with coded symbols and students begin decoding them.	■	☐	☐	Drafts were returned with coded symbols. Students decoded and discussed errors. Reference cards used less frequently than week 1
2	Students discuss the codes and negotiate corrections within groups or with peers.	■	☐	☐	Groups discussed error types and debated corrections.
2	Peer exchange across groups occurs and the teacher facilitates without supplying direct answers.	■	☐	☐	Groups exchanged drafts with one another. Students wrote brief peer comments. Teacher prompted but didn't provide direct answers.
3	Groups revise and complete a final draft that incorporates coded and peer feedback.	■	☐	☐	All groups completed a final draft.
3	Final presentation, summary feedback, and individual reflection closes the cycle.	■	☐	☐	Each group presented for 3–4 minutes. Teacher provided summary feedback. Students wrote individual reflections.

Note: S.: Session, Y.: Yes, P.: Partly, N.: No

A. Instructional Format and Feedback Cycle (continued)

A2. Control Group (Traditional Correction)

S.	Observed Feature	Y.	P.	N.	Evidence / Notes
1	Teacher introduces the writing prompt or task without collaborative modelling.	☐	☐	☐	
1	Students draft individually and work mostly in silence.	☐	☐	☐	
1	Drafts are collected at the end of the session.	☐	☐	☐	
2	Students continue the same essay individually; no pair or group discussion is required.	☐	☐	☐	
2	Teacher circulates mainly to answer individual questions rather than facilitate peer learning.	☐	☐	☐	
2	Teacher collects completed drafts for home correction or later return.	☐	☐	☐	
3	Corrected essays are returned with underlining and direct written correction.	☐	☐	☐	
3	Students review corrections individually, with limited questioning.	☐	☐	☐	
3	A model text or teacher-provided correct version is supplied and copied.	☐	☐	☐	

Note: S.: Session, Y.: Yes, P.: Partly, N.: No

B. Student Engagement and Interaction

Indicator	V. L.	L.	M.	H.	V. H.	Notes
Attention during teacher explanation or task briefing	☐	☐	☐	■	☐	students listened attentively. Several raised hands to contribute ideas when prompted.
Engagement with received feedback or corrections	☐	☐	☐	☐	■	students decoded symbols with focus. Reference cards used less frequently than week 1.
Quality of peer or pair interaction (when relevant)	☐	☐	☐	☐	■	Groups debated corrections. students used metalanguage confidently.
Willingness to ask questions about errors or revisions	☐	☐	☐	■	☐	Students asked peers first, then Teacher
Use of metalanguage (e.g., tense, agreement, article, punctuation)	☐	☐	☐	■	☐	Frequent use of "Tense", "agreement", "preposition", "article", "word order".
Student-initiated correction or revision	☐	☐	☐	☐	■	students identified and corrected errors without Teacher prompting.
Overall participation and on-task behaviour	☐	☐	☐	☐	■	All groups on Task. smooth Transition. No off-Task behaviour.

Note: V.L.: Very Low, L.: Low, M.: Moderate, H.: Height, V.H.: Very Height.

Estimated percentage of actively engaged students: 90–95 %

Inspector's Note:

By week 4, The 3CM has become routine. Students internalised the coding system. Metalanguage use has increased significantly. Groups function autonomously with minimal Teacher intervention.

C. Classroom Dynamics and Teacher Practices

Observation Category	Notes
Clarity of instructions and task guidance	Instructions were minimal. Students knew routines. Teacher activated prior knowledge by asking for examples.
Responsiveness to students' questions	Teacher prompted: "What do your group members think?" No direct answers provided.
Type and quality of feedback provided	Coded symbols consistent. No direct corrections. Feedback was accurate and targeted.
Classroom organization, seating, and noise level	Groups formed quickly. Productive hum of collaboration. No off-task noise.
Time management across phases or sessions	All phases on schedule. Transitions smooth.
Use of board, model text, coding system, or visual aids	Poster displayed but rarely consulted. No model text provided. Students produced their own.
Evidence of student autonomy and self-correction	High students initiated corrections, consulted peers, and revised without teacher prompting.
Encouragement of discussion, revision, or reflection	Teacher encouraged peer discussion before asking for help. Reflection activity included.

D. Comparative Lens (Optional)

Dimension	Experimental Group (ICM)	Control Group (Traditional)
Nature of feedback provided	Coded symbols only	Red underlines + direct corrections
Teacher role during correction	Facilitator, prompter	Corrector, model provider
Student role during the lesson	Active decoder, collaborator, reviser	Passive receiver, copier
Peer interaction and collaboration	Extensive (within and between groups, presentations)	None (students sat at tables for two in silence)
Student engagement with feedback	90-95% actively engaged	10-15% glanced at corrections
Revision requirement	Yes (final revised draft every week)	No (only copied model text from board)
Use of metalanguage	Frequent	None
Observable learning behaviours	Decoding, discussing, debating, revising, presenting, reflecting	Copying, glancing, waiting
Student autonomy	High	None
Evidence of progress or improvement	Yes (errors reduced, writing improved)	No (same errors as week 1)

Comparative Note:

By week 4, the gap between the two groups has widened significantly. The "EG" is active, collaborative, and autonomous. Students use metalanguage, revise their work, and present to peers. The "CG" remains passive and dependent. The "EG" has developed a revision culture; the control group has never revised an essay. The ICM is producing observable learning gains; traditional correction is not.

E. Challenges or Constraints Observed

Challenge	Y.	N.	Description / Evidence
Confusion with feedback symbols, instructions, or task expectations	☐	■	No confusion. symbols internalized
Limited engagement with feedback or corrections	☐	■	Engagement remains high (90–95%)
Uneven participation among students or groups	☐	■	Assigned roles ensured equitable participation.
Over-reliance on teacher confirmation or direct answers	☐	■	Students consulted peers before approaching Teacher
Weak or absent peer interaction where collaboration was possible	☐	■	Peer interaction was extensive and productive.
Mechanical copying or superficial completion without understanding	☐	■	Students produced original revisions, not copies
Difficulty moving between phases, tasks, or transitions	☐	■	Transitions smooth
Off-task behaviour, distraction, or loss of focus	☐	■	No off-Task behaviour observed.
No visible revision or limited transfer of feedback to later writing	☐	■	Revision occurred every week. Transfer evident.
Other (specify):_____	☐	■	None observed.

Note: Y.: Yes, N.: No

F. Overall Impression and Summary Comments

Strengths observed during the session:

1. Full fidelity of 3CM implementation.
2. Internalisation of coding system and extensive peer interaction.
3. Reflection activity included and successful feedback loop completed within sessions.
4. Teacher as skilled facilitator (no direct answers)

Weaknesses / concerns observed:

1. Small minority (5–8%) of less engaged students remain.
2. Two groups finished revision early; extension activity provided.
3.
4.

General summary comment: Week 4 demonstrates that the 3CM is operating effectively. Students are autonomous, collaborative, and increasingly proficient in metalanguage. The initial challenges of week 1 have been resolved. The teacher has fully transitioned to a facilitator role.

Recommendations for Subsequent Sessions

1. Provide targeted support for the small minority of less engaged students
2. Consider peer mentoring for struggling groups.
3. Introduce self-reflection logs for students to document recurring error patterns.
4.
5.

Final Summary Comment from the Inspector: By week 4, the 3CM has moved beyond implementation and into routine effectiveness. Students are no longer learning how to use the model; they are using the model to learn. Metalanguage use is frequent. Peer interaction is frequent. Revision is automatic. The contrast with the "CG" is profound.
